

# Go 1.12

# timeline

28 Mar 2012	1.0
...	
16 Feb 2017	1.8
24 Aug 2017	1.9
16 Feb 2018	1.10
24 Aug 2018	1.11
<b>?? Feb 2019</b>	<b>1.12</b>

# try & test!

```
$ go get golang.org/dl/go1.12rc1
```

```
$ go1.12rc1 download
```

```
$ go1.12rc1 build
```

what is in 1.12?

go tour removed  
from binary distribution

# “godoc” vs “go doc”

```
$ godoc &
```

```
$ open localhost:6060/pkg/strings
```

```
$ go doc strings.ReplaceAll
```

```
func ReplaceAll(s, old, new string) string
```

```
...
```

end of binary-only packages

“go vet” rewrite:  
more analysis tools

darwin: syscalls through libSystem

modules

# modules: use outside module directory

```
$ cd /tmp
```

```
$ export GO111MODULE=on
```

```
$ go1.11.5 get golang.org/x/exp/cmd/apidiff
```

```
go: cannot find main module; see 'go help modules'
```

```
$ go1.12rc1 get golang.org/x/exp/cmd/apidiff
```

```
go: finding golang.org/x/exp/cmd/apidiff latest
```

```
...
```

```
# success!
```

# more modules

- go.mod now gets language version
- use “replace” before trying network
- concurrent go commands that download & extract modules

```
$ cat go.mod
```

```
module testmod
```

```
go 1.12
```

```
require github.com/lib/pq v1.0.0
```

```
replace github.com/lib/pq => ../pq
```

# more modules

- “runtime/debug”: new BuildInfo type exposes the build information

# compiler: calling conventions

- ABI0
- ABIInternal

library changes

“os”: os.UserHomeDir

# “strings”: ReplaceAll

```
s := "oink oink oink"
```

```
old: strings.Replace(s, "oink", "moo", -1)
```

```
new: strings.ReplaceAll(s, "oink", "moo")
```

# “fmt”: prints maps sorted by key

```
package main
```

```
import "fmt"
```

```
func main() {
```

```
    m := map[string]string{
```

```
        "b": "gophers",
```

```
        "a": "hello",
```

```
    }
```

```
    fmt.Println(m)
```

```
}
```

```
$ go1.11.5 run mapfmt.go
```

```
map[b:gophers a:hello]
```

```
$ go1.12rc1 run mapfmt.go
```

```
map[a:hello b:gophers]
```

# “net”

- RFC 6555 Fast Fallback ("Happy Eyeballs") is now enabled by default
- TCP keep-alives are now enabled by default

# “crypto/tls”: TLS 1.3

- GODEBUG=tls13=1
- no 0-RTT
